To Whom It May Concern,

Letter of Recommendation

We offer this letter of recommendation for SunPower Innovation LTD, is solar EPC (Engineering Procurement and Construction) company located at West Legon, Accra and licensed by Ghana Energy Commission. The institute contracted them on 17th November, 2017 to Supply, Design and Install **200KWp** grid connected system to reduce our high cost of electricity bills.

Their commitment to understanding and executing the projects, from start to completion is recommendable. They were extremely helpful in the reduction of our electricity bills and found their engineers to be responsible and very competent in their fields.

Crop Research Institute would highly recommend SunPower Innovations, to any company seeking solar systems. Every conversation, meeting, and discussion was handled professionally and most importantly their service after installation has been excellent.

Yours faithfully,

DR. M.B MOCHIAH
